Bulk Product CSV Import

CSV column reference - the PDF is for reference only and cannot be imported.

Use this exact CSV header row:

name,category_id,carat_weight,price,stock,description,type,sub_type,insert_type,

color,clarity,size,quality,length,width,height,quantity,cut_shapes,image_names

Required columns

name - product name

category_id - numeric category ID; alternatively use category or category_name with its name.

carat_weight - numeric carat weight

price - numeric product price (also used as the gemstone price)

stock - whole-number stock count

Optional product column

description - used as both the product and gemstone description

Optional gemstone columns

type, sub_type, insert_type, color, clarity, size, quality, cut_shapes - text details

length, width, height - numeric dimensions; quantity - whole number (defaults to 1)

Optional image_names column

List exact filenames separated by | in the order they should appear:

ruby-front.jpg|ruby-side.jpg|ruby-back.jpg

Upload image files before importing to storage/app/public/products/import/.

First image is primary; subsequent images are gallery images in the listed order.

Supported image extensions: JPG, JPEG, PNG, GIF, WebP. Filenames only; no folders.

Accepted import file formats: CSV, TXT, XLS, XLSX. PDF is not an import format.
